SUMMARY

Full Stack Developer (MERN) and MCA graduate at MMMUT Gorakhpur (2026) with production experience building scalable REST APIs, Responsive UI, JWT-secured Auth, AI- Integrated and CRUD driven systems through independent projects as well as team projects. Strong fundamental in (DSA, OOPS, System design). Eager to apply this same ownership and problem-solving mindset to real production engineering challenges.

TECHNICAL SKILLS

Languages	: JavaScript (ES6+), TypeScript, C++, Java, Python, HTML5, CSS3, SQL
Frontend	: React.js (Hooks, Context API, React Router), Next.js, Tailwind CSS, Framer Motion, Three.js
Backend	: Node.js, Express.js, REST API design, JWT authentication, Clerk
Database	: MongoDB Atlas, MySQL
AI integration	: Gemini API Integration, AI vision API Integration, real time data streaming.
Tools	: Git, GitHub, VS Code, IntelliJ IDEA, Postman
CS Fundamentals	: DSA, OOPS, System Design Basics (LLD).

EDUCATION

Madan Mohan Malaviya University of Technology
Masters in Computer Application, **8.15 CGPA**

Gorakhpur, Uttar-Pradesh
August 2024-May 2026

Banaras Hindu University (Institute of Science)
Bachelors (Minor: computer science), **7.92 CGPA**

Varanasi, Uttar Pradesh
July 2019-May 2022

PROJECTS

HireLogic — AI Resume Builder & ATS Analyzer (Team Project)

(March 2026- May 2026)

Tech: (React.js, Node.js, Express.js, MongoDB, Gemini API, Three.js)

[Source Code](#)

- A full-stack AI resume builder that generates a formatted, job-ready resume in under 3 seconds by streaming structured user input through the Google Gemini API.
- Built an **ATS Scoring Engine** that parses resume text, returns a keyword-match score out of 100, and highlights missing skills — helping users improve shortlist visibility before submitting applications.
- Integrated **Clerk** for **JWT-based** user authentication and session management stored resumes securely in **MongoDB** Atlas and built an interactive 3D landing UI
- Used **Three.js** and **Framer Motion**, deployed on **Netlify** with GitHub-triggered **CI/CD**.
- Reduced initial page load time by **40%** by implementing **React lazy loading** and **code splitting**. Optimized Gemini API calls with async/await error handling. Ensured full responsiveness across mobile, tablet, and desktop breakpoints.

Plant Identifier App — AI Powered species Recognition

(April 2025- August 2025)

Tech: (React.js, TypeScript, Tailwind CSS, MongoDB Atlas, AI Vision API)

[Source Code](#)

- Built a responsive **React + TypeScript** app that identifies 1000+ plant species from uploaded images using an **AI Vision API**, with **AI chatbot** where you can get instant information about scanned plant.
- Developed an **AI Health Check module** that diagnoses plant diseases from user-uploaded or scanned photos using image recognition. Built a **Smart Reminders** system which reminds user of plant care.
- Implemented a **mobile-first responsive UI** with **Tailwind CSS** grid and flexbox, managing real-time species data and UI state with **React Hooks** (useState, useEffect) tested across 3 screen breakpoints for consistent rendering.
- Built a Node.js/Express.js backend API handling user authentication, chat messaging, and plant-scanning requests, optimized for fast AI response times.
